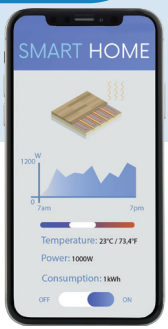
Measure W & kWh

Z-WAVE PLUS SmartStart Security 2

Qubino Flush On/Off Thermostat 2

Measure power consumption of your heating system

Smart Thermostat measures power consumption of the connected heating system - current consumption in **W** and cumulated consumption in **kWh**.



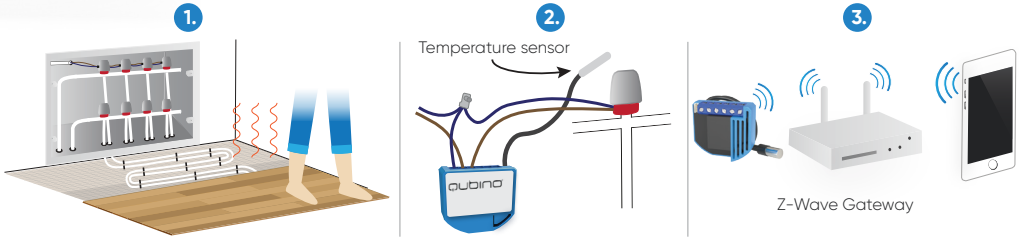
Measure and automatically regulate temperature

The Qubino smart thermostat comes with a digital temperature sensor. It allows you to measure and regulate room temperature by automatically switching on/off the heating device connected to it. You can decide whether you want to display the temperature in °C or °F.

Flush On/Off Thermostat 2 can be used with all types of heating systems.

Water heater | Heat pump | Radiator | Underfloor heating | IR panel

Installation example



Fast & Trouble-free set up with Z-Wave SmartStart

The setup of Smart Thermostat is user-friendly for everyone. Simply scan the QR code on the device, install it and provide with power. Your SmartStart gateway recognizes the device and the inclusion is done automatically.

Protect your smart home from cyber-attacks.

Qubino Flush On/Off Thermostat 2 is not only easy to setup but it's virtually un-hackable, with **the highest level of security** for smart home devices on the market – Security 2.

High device quality | Made in EU | Quick & reliable support | Supports SmartStart & S2
